Community structure of *Vaccinium uliginosum* L. visitors – impact of fragmentation

Alban CHYZY, Denis MICHEZ

University of Mons, Laboratory of Zoology, 20 place du parc, 7000 Mons, Belgium. E-mail: denis.michez@umh.ac.be.

Fragmentation of habitats is described as one of the main factors of global biodiversity decrease. But they are a few empirical studies evaluating the impact of plant fragmentation on community structure. In the present study we show that small populations of *Vaccinium uliginosum* support less visitors diversity and less pollen foragers.
