

On the bumblebee fauna of Turkey: II. The genus *Pyrobombus* (Hymenoptera, Apidae, Bombinae)

by Hikmet Özbek

Abstract: Fifteen species and subspecies of the genus *Pyrobombus* are recorded in Turkey. They are listed together with their horizontal and altitudinal distribution, habitats and flowers visited. *P. serrisquama* is recorded for Turkey for the first time. With 2274 specimens collected, *P. incertus* proved to be the most widespread and abundant species, recorded from about sea level up to more than 3000 m. It was followed by *P. niveatus* with 1467 specimens and *P. soroeensis* with 1400 specimens. *P. sulfureus* was found at only two localities with five specimens, and it should be classified as »endangered«.

Kurzfassung: In der Türkei wurden bisher 15 Arten und Unterarten der Gattung *Pyrobombus* nachgewiesen. Sie werden hier zusammen mit ihrer horizontalen und vertikalen Verbreitung, ihren Habiten und den von ihnen angeflogenen Blütenpflanzen aufgelistet. *P. serrisquama* wurde zum ersten Mal in der Türkei festgestellt. *P. incertus* stellte sich mit 2274 Exemplaren als die am weitesten verbreitete und häufigste Art heraus, die von Meereshöhe bis auf über 3000 m vorkommt. Ihr folgte *P. niveatus* mit 1467 Exemplaren und *P. soroeensis* mit 1400 Exemplaren. *P. sulfureus* wurde nur an zwei Stellen in insgesamt fünf Exemplaren gefunden und sie muß als bedroht eingestuft werden.

Key words: Bumblebees, *Pyrobombus*, Bombinae, Hymenoptera, distribution, Turkey.

Introduction

In addition to early works by FRIESE & VON WAGNER (1912), FAHRINGER (1921) and FAHRINGER & FRIESE (1921), the bumblebee fauna of Turkey has been intensively studied in particular by REINIG (1967, 1968, 1971, 1973, 1974). The present author began to study this group in Turkey in the 1970s (ÖZBEK 1979, 1983, 1990a, 1990b) and has collected bumblebees in almost all parts of the country. This paper gives an overview of the genus *Pyrobombus*, which comprises 15 taxa in Turkey. In the first part of the study (ÖZBEK 1997), the genera *Alpigenobombus*, *Bombias* and *Bombus* had been treated.

The species are listed in alphabetical order by subgenera and provinces. The information relating to material, methods and other particulars was given in Part I. However, it should be repeated here that collecting efforts were not distributed equally over all parts of the country. In particular, more intensive and systematic collections were undertaken in Erzurum and adjacent provinces, so that these have more records than the other provinces. The symbols on the distribution maps show the sampling localities but not the number of specimens taken, which varied from 1 to about 50.

Genus *Pyrobombus* Dalla Torre, 1880

Subgenus *Pyrobombus* D. T. (s. st.) (= *Pratobombus* Vogt, 1911)

Pyrobombus brodmannicus (Vogt, 1909)

This species was found in relatively small numbers (105 specimens) only in north-east Anatolia (Fig. 1), in mountain meadows above 2000 m up to ca. 3500 m.

Records: Ağrı Prov.: Eleşkirt (2100 m) at Tahir Mt. – Ardahan Prov.: İlgar Mt. (Posof) 2400–2600 m, Şehitveren (Hanak) 2100 m. – Bayburt Prov.: Kopdağı 2200–2400. – Erzurum Prov.: Palandöken Mts. 2100–2400 m, Çat 2000 m, Dumanlı Mt. 2500 m, Dumlu Mts. 2100–2800 m, Kargapazarı Mts. 2000–2900 m, Karagöbek 2300–2500 m, Rabat (Pasinler) 2100–2500 m, Karlı (Tortum) 2200–2500 m, Kireçli Mt. (Narman) 2000–2500 m, Başaklı (Oltu) 2000–2200 m, Çamlıbel (Oltu) 2100 m, Tutmaç (Oltu) 2200 m, Turnalı (Şenkaya) 1800–2100 m, Şenkaya Yaylaları 2200–2600 m, Süngübeyir (Olur) 2200–2500 m. – Gümüşhane Prov.: Zigana Mt. (Torul) 1700–2200 m. – Kars Prov.: Sarıkamış 2200 m. – Rize Prov.: Ballıköy (İkizdere) 2600 m.

Distribution data from literature: Kopdağı, Çakmak Dağı, Tahir pass (REINIG 1971); eastern Anatolia (TKALCU 1973); Dumlubaba, Palandöken, Başaklı, Oltu, Kargapazarı and Palandöken Mts. (Erzurum) (ÖZBEK 1990a).

Pyrobombus haematurus (Kriechbaumer, 1870)

This species was found in low number (total of 65 specimens) in north Anatolia, including Bursa Province (Fig. 2) in forests and woodland above 600 m up to ca. 2600m.

Records: Ardahan Prov.: İlgar Mt. (Posof) 2400–2600 m. – Artvin Prov.: Kafkasor 1100 m, Genye Mt. 2200 m. – Ankara Prov.: Kızılcahamam 1500 m. – Bursa Prov.: Uludağ 1200–1400 m, Kirazlı Yayla 1300 m. – Çankırı Prov.: İlgaz Mt. 1600 m. – Gümüşhane Prov.: Zigana Mt. 1900 m. – Kastamonu Prov.: Kırık 900 m. – İstanbul Prov.: Garden of Forestry Faculty. – Ordu Prov.: Boyadı 1000 m. – Rize Prov.: Ortayayla (Pazar) 1100 m. – Samsun Prov.: Dikbiyik (Çarşamba) 900 m. – Sinop Prov.: Erfelek 1200 m. – Tokat Prov.: Tokat Town 950 m. – Trabzon Prov.: Maçka 600 m, Hamsiköy 1200 m.

Distribution data from literature: Uludağ (near Bursa), İsfendiyar Mts. in Bolu Prov. (REINIG 1967, 1968, 1971).

Pyrobombus skorikowi (Vogt, 1911)

This was the least abundant species among the species of *Pyrobombus* (31 specimens) after *P. sulfureus* (Friese). It is distributed in northern Anatolia (Fig. 3) on mountain meadows, adjacent woodland and forest in general above 1000 m.

This species showed considerable variation. Material was not sufficient to compare and separate one form from another, and so it was very difficult to decide precisely on their status. The specimens collected from the western part of the country can be determined as *Pyrobombus pratorum* Linnaeus. The ones collected from the eastern part, particularly from Erzurum and Ardahan, are determined here as *P. skorikowi*. It could be concluded that the subgenus *Pyrobombus* (s. st.) is represented in Turkey by three species, but if we accept the western population as a separate species (*P. pratorum*) then this number will be four. It should be pointed out that all of the species of subgenus *Pyrobombus* (s. st.) had low populations.

Records: Ardahan Prov.: İlgar Mt. 2400–2600 m. – Artvin Prov.: Karagöl (Borçka) 1900 m, Genye Mt. 1800 m. – Bolu Prov.: Abant 1300 m. – Bursa Prov.: Uludağ. – Çankırı Prov.: İlgaz Mts. 1600 m. –

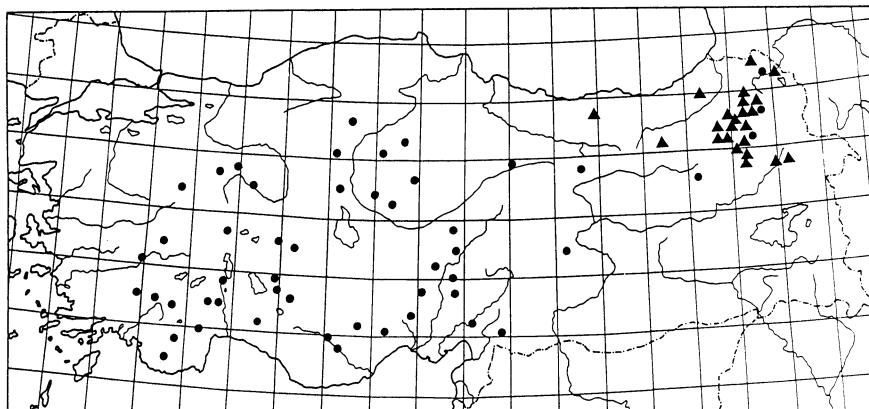

Fig. 1. Distribution of *Pyrobombus brodmannicus* (Vogt) (triangles) and *P. vorticosus* (Gerstaecker) (dots) in Turkey.

Erzurum Prov.: Şenkaya 2100 m, Süngübayır (Olur) 2200 m, İnci (Oltu) 2000 m, Orcuk Yaylası (Oltu) 2000 m, Uzundere Yaylası (Uzundere) 2200 m, Todan (Narman) 2300 m, Karlı (Tortum) 2400 m, Güngörmez 2400 m. – Giresun Prov.: Tamdere 1300 m. – Gümüşhane Prov.: Zigana Mt. (Torul) 1600–1800 m. – Kastamonu Prov.: Çetmi 1500 m. – Ordu Prov.: Gölköy 1200 m, Dereköy 1300 m. – Rize Prov.: Ballıköy (İkizdere) 2600 m. – Samsun Prov.: Malgölü (Alaçam) 1000 m. – Sinop Prov.: Erfelek 1600 m, Ayancık 900 m. – Trabzon Prov.: Erikbeli (Tonya).

Distribution data from literature: Uludağ, Sultandağ, Semen Mt., Ilgaz Mts., İsfendiyer Mts., Rize Mts. and Trabzon Mts. (REINIG 1967, 1968, 1971) as *Bombus pratorum* L.

Subgenus *Cullumanobombus* Vogt, 1911

Pyrobombus apollineus (Skorikov, 1910)

A widespread species in eastern Anatolia, but specimens were also collected from some localities in Central Anatolia, including Kayseri, Sivas and Yozgat provinces (Fig. 4). It has a higher abundance in Erzurum province than in the other provinces. A total of 285 specimens was collected. It occurs in mountain meadows, pastures, and uncultivated area left between cultivated land. It prefers open areas and generally high altitudes. It is a pollinator of *Onobrychis viciaefolia*, *Medicago sativa*, *Trifolium pratense*, *T. repens* and some other leguminous plants. It also visits *Helianthus annuus* and *Brassica napus* which are important for oil seeds.

Records: Ağrı Prov.: Tahir Mt. 2100–2400 m, Eleşkirt 2000 m, Hamur 2100 m, Tutak 2000 m, Patnos 1900. – Ardahan Prov.: Türközü (Posof) 1200 m, İlgar Mt. (Posof) 2300–2700 m, Hanak 2000 m, Çıldır 2000 m, Göle 2100 m. – Artvin Prov.: Sebzeciler 500 m. – Bayburt Prov.: Demirözü 1700 m, Kop Mt. 2000–2800 m. – Bitlis Prov.: Central 1600 m, Tatvan 1500 m, Adilcevaz 1500 m. – Erzincan Prov.: Tercan 1700 m, Cevizli 1400 m, Çağlayan 1350 m, Refahiye 1600 m, Kızıldağ 2000–2600 m. – Erzurum Prov.: Erzurum and Pasinler plateaus 1800–1900 m, Anzav valley (Oltu) 900–1800 m, Atlikonak (İlica) 1900–2100 m, Başaklı (Oltu) 1700–2200 m, Dikyar (Uzundere) 1400 m, İspir pass 2200 m, Kaledibi (Tortum) 1500 m, Köprüköy 1600 m, Süngübayır (Olur) 1700–2100 m. – Turnalı (Şenkaya) 1900–2200 m, Kargapazarı and Palandöken Mts. 2000–2800 m. – Gümüşhane Prov.: Kale

1600 m, Kelkit 1500 m. – İğdır Prov.: Karaçomaklı, 2400–2800 m. – Kars Prov.: Susuz 1900 m, Laloğlu (Selim) 2000 m, Kümbetli (Selim) 1900 m, Digor 1900 m, Sarıkamış 2000–2400 m, Karakurt (Sarıkamış) 1700 m, Kağızman, 1200m. – Kayseri Prov.: Erciyes Mt. 2000–2100 m. – Muş Prov.: Muş plateau 1300–1400 m. – Sivas Prov.: Suşehri 1200 m, Hafik 1700 m, Zagra 1600 m. – Tunceli Prov.: Munzur (Ovacık) 2100 m, Hozat 1800 m, Pülümür 1900–2400 m. – Van Prov.: Tendürek Mts. (Çaldırıhan) 2200 m, Erciş 1800 m, Gevaş 1700 m. – Yozgat Prov.: Akdağ Madeni 1800 m.

Distribution data from literature: Gümüşhane, Kop Mt. (Bayburt), Çakmak Mt. (Erzurum), Tahir Mt., Eleşkirt, Hamur (Ağrı), Van (REINIG 1971), Erciyes Mt. (Kayseri) (REINIG 1973); Erzurum (ÖZBEK 1983); Kargapazarı and Palandöken Mts. (Erzurum), Tercan (Erzincan) (ÖZBEK 1990a).

***Pyrobombus serrisquama* (Morawitz, 1888)**

The distribution is confined to north-east Anatolia in some localities of Ardahan, Kars and Erzurum provinces (Fig. 5). It has a low abundance, and a total of 45 specimens was collected. It occurs in high land and open areas, usually in mountain meadows and mountain pastures.

Records: Ardahan Prov.: İlgar Mt. (Posof) 2300–2600 m, Posof 1400 m, Hanak 2000 m, Şehitveren (Hanak) 2100 m, Göle 2000 m. – Artvin Prov.: Genye Mt 1800 m. – Erzurum Prov.: Süngübeyir (Olur) 2000 m, Turnalı (Şenkaya) 1900–2200 m, Çamlıbel Yaylası (Oltu) 2100 m, Karlı (Tortum) 2200–2600 m, Kireçli Mt. (Narman) 2200–2400 m, Umudum Yaylası 2200 m, Karaçuha (Horasan) 1650 m, Rabat (Pasinler) 2200–2400 m, Atatürk University Campus 1850 m. – Kars Prov.: Sarıkamış 2100–2400 m, Susuz 1900 m.

Distribution data from literature: This is a new record for the Turkish fauna.

Subgenus *Kallobombus* Dalla Tore, 1880 (*Soroeensibombus* Vogt, 1911)

***Pyrobombus soroeensis* (Fabricius, 1793)**

This species is abundant almost throughout the country (Fig. 6). 1400 specimens were collected. It shows geographical variation. The widespread subspecies is *P. soroeensis proteus* Gerstaecker, which occurs in the western and central part of the country, extending in the east to the Erzincan, Bayburt and Gümüşhane provinces. *P. soroeensis radoszkowskyi* (Dalla Tore) occurs in eastern Anatolia, particularly in Erzurum, Agri, Kars and Ardahan provinces. Additionally, *P. soroeensis citrinus* (Radoszkowsky) is present in some localities.

It occurs in wooded places, orchards, meadows adjacent to woodland areas. *P. soroeensis* is a good pollinator of fruit trees. Orchards located along the valleys between mountains, particularly in eastern Anatolia, are favourable for this species because of their abundant flora and nesting sites. The abundance of this species was thus very high in most of these localities.

Records: Adana Prov.: Pozanti 1600 m. – Amasya Prov.: Boğazköy (Suluova) 1300 m. – Ankara Prov.: Kızılcahamam 1500 m, Bulak 1600 m. – Ardahan Prov.: İlgar Mt. (Posof) 2400–2600 m, Yurtbekler 1400 m, Türközü (Posof) 1600 m, Şehitveren (Hanak) 2100 m, Gölebert 2200 m, Karınca (Göle) 2200 m. – Artvin Prov.: İşhan 900 m, Kılıçkaya 1400 m, Sarıgöl 1100 m, Altıparmak 1800–2000 m, Demirkent (Yusufeli) 500 m, Akarsu (Ardanuç) 900 m, Karagöl (Şavşat) 1600–1800 m. – Bayburt Prov.: Kop Mt. 2000–2400 m. – Bolu Prov.: Gerede 900 m, Abant Gölü 1300 m. – Bursa Prov.: İnegöl 1400 m, Uludağ 1700–2000 m. – Çankırı Prov.: İlgaz Mt 2100 m. – Erzincan Prov.: Cevizli 1300 m, Çağlayan 1350 m, Sakaltutan 2100 m, Salur 1700 m, Kızıldağ (Refahiye) 2300 m. – Erzurum Prov.: Kargapazarı Mt. 2200 m, Süngübeyir (Olur) 1800–2200 m, Turnalı 1800–2100, Ormanlı 1700–2000 m, Gaziler (Şenkaya), Uzunoluk 1900 m, Ayvalı 1000 m, Anzavderesi 900–1400 m, Başaklı 1700–2200

Distribution data from literature: Uludağ and Sultan Mt. (REINIG 1967); Bolu, Kastamonu and Karabük (REINIG 1968); Rize Mts (REINIG 1971); Ardahan (REINIG 1973); Kırpinar Mt. (Konya) (REINIG 1974); Oltu, Tortum (Erzurum), Ardahan (ÖZBEK 1983), Adana (ASLAN & SEKEROĞLU 1996) as *P. soroeensis lecitatus* (Kruseman).

Subgenus *Melanobombus* Dalla Torre, 1880 (*Lapidariobombus* Vogt, 1911)

Pyrobombus alagesianus Skorikov, 1922

This species occurred only in the high plateaus of north eastern Anatolia (Fig. 7). 343 specimens were collected on mountain meadows and mountain pastures. It prefers higher altitudes (1800–3000 m), colder climate and more open areas.

Records: Ardahan Prov.: İlgar Mt. (Posof) 2200–2600 m, Şehitveren (Hanak) 2000 m. – Erzurum Prov.: Süngübayır (Olur) 1900–2200 m, Kireçli Mt. (Narman) 1800–2500 m, Kargapazarı Mts. 1900–2400, Dumlu Mts. 2000–2800 m, Palandöken Mt. 2000–2900 m, Karlı (Tortum) 2000–2600 m.

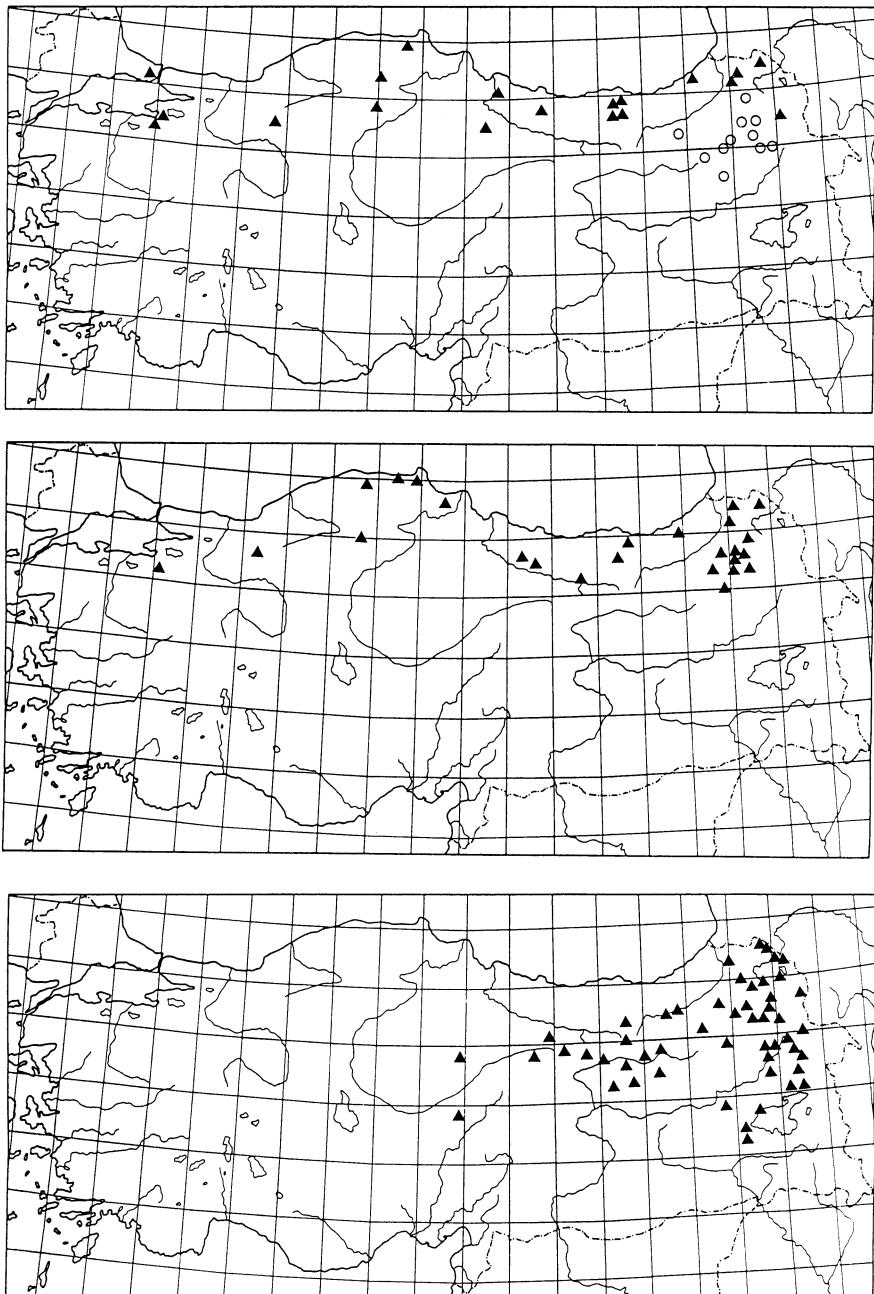

Distribution data from literature: Yanlızçam Mt. (Ardahan) (REINIG 1973); Palandöken Mt., Dumlu Mt. and Kargapazarı Mts. (Erzurum) (ÖZBEK 1983, 1990a).

Pyrobombus erzurumensis Özbek, 1990

The type locality of this species is Erzurum. Its abundance was not high, and 123 specimens were collected. The specimens at hand exhibit some variation in the color of the hairs, particularly on the face, but it is difficult to recognise separate subspecies because specimens collected even at the same localities had the similar variations. It was collected on mountain meadows and pastures above about 2000 m up to 3000, sometimes even higher. It prefers open areas. With this study new localities were found for this species. However its distribution is apparently confined to Agri, Ardahan, Bayburt and Erzurum provinces (Fig. 2).

Records: Ağrı Prov.: Tahir Mt. 2300 m. – Ardahan Prov.: İlgar Mt. (Posof) 2200–2600 m. – Bayburt Prov.: Kop Mt. 2000–2800 m. – Erzurum Prov.: Süngübayır (Olur) 2000–2200 m, Başaklı (Oltu) 2000 m, Uzundere Yaylası 2100 m (Uzundere), Kireçli Mt. (Narman) 2000–2500 m, Karlı (Tortum) 2000–2400 m, Rabat (Pasinler) 1900–2200 m, Ahircık (Ilıca) 2200 m, Zazalar (Çat) 2100 m, Kargapazarı, Dumlu and Palandöken Mts.

Distribution data from literature: Erzurum (type locality) (ÖZBEK 1990b).

Figs. 2–4: Distribution of *Pyrobombus haematurus* (Kriech.) (triangles), *P. erzurumensis* (Özbek) (circles) (Fig. 2, above), *P. skorikowi* (Vogt) (Fig. 3, middle), and *P. apollineus* (Skorikov) (Fig. 4, below) in Turkey.

***Pyrobombus incertus* Morawitz, 1881**

P. incertus was the most widespread and abundant bumblebee species of the genus *Pyrobombus* occurring in Turkey (Fig. 8). 2274 specimens were collected. It is found in meadows, pastures, Leguminosae fields, uncultivated areas between cultivated land and orchards. It is a species of open land and occurs from the altitudes of about 100 m up to ca. 3500 m. It is a very good pollinator of *Helianthus annuus*, *Brassica napus*, *Onobrychis viciaefolia*, *Medicago sativa*, *Trifolium pratense*, *T. repens* and many other cross-pollinated plants including fruit trees and many species of wild plants.

***Pyrobombus lapidarius lapidarius* Linnaeus, 1758**

This subspecies occurs in the northern part of the country, from Uludağ in the west to Erzincan and Gümüşhane provinces in the east (Fig. 9). It has a low abundance, and 168 specimens were collected. It occurs in woodland, mountain meadows adjacent to wooded areas and occasionally orchards.

***Pyrobombus lapidarius caucasicus* (Radoszkowski, 1859)**

This subspecies occurs in north east Anatolia (Fig. 9). It is quite abundant locally. 362 specimens were collected. It occurs in forest, woodland, adjacent to forested areas above 1500 m and in orchards. *P. l. lapidarius* occurs in northern Turkey from Uludağ to Kızıldağ (Erzincan) and Zigana Mt. (Gümüşhane) whereas *P. l. caucasicus* occurs in the north-east of the country. It is possible to draw a definite borderline between Zigana and Kızıldağ separating both subspecies. Both of them use almost the same habitats, but *P. l. caucasicus* prefers higher altitudes and colder climates.

***Pyrobombus sichelii* (Radoszkowski, 1859)**

The distribution area of this species is also confined to the northeast of Anatolia (Fig. 7). It had a very low abundance, and 49 specimens were collected. It was found in mountain meadows and mountain pastures.

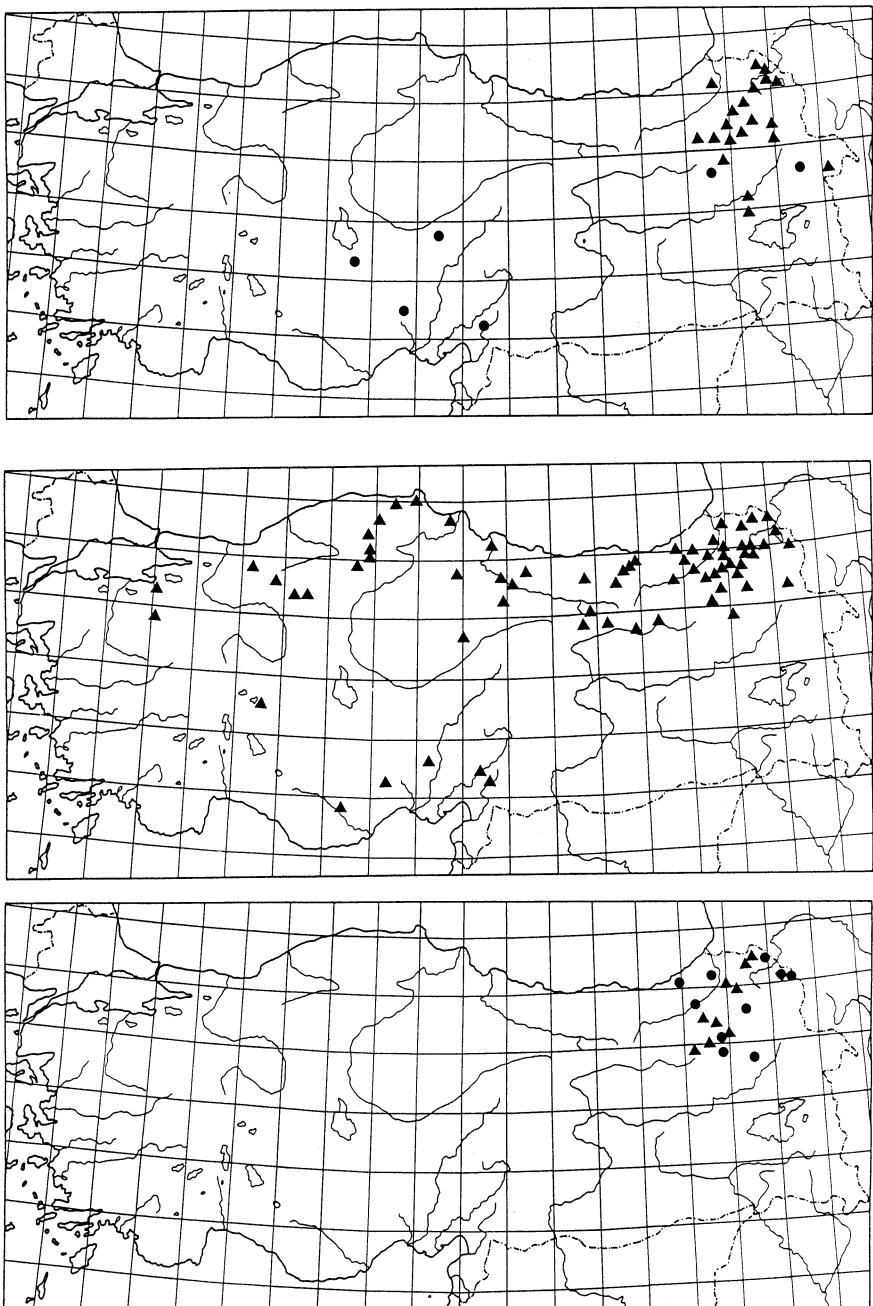

Fig. 5–7. Distribution of *Pyrobombus serrisquama* (Morawitz) (triangles), *P. sulfureus* (Friese) (dots) (Fig. 5, top), *P. soroeensis* (Fabricius) (Fig. 6, middle), *P. alagesianus* (Skorikov) (triangles), and *P. sichelii* (Radoszkowski) (dots) (Fig. 7, below) in Turkey.

Subgenus *Sibiricobombus* Vogt, 1911

Pyrobombus niveatus (Kriechbaumer, 1870)

P. niveatus is a widespread species throughout almost the entire country (Fig. 10). It occurs from sea level up to ca. 3000 m. Its abundance was quite high, and 1467 specimens were collected. It was the second most abundant species after *P. incertus*. It was recorded in meadows, mountain meadows and orchards, often adjacent to villages and farm houses. It is a good pollinator of some cultivated plants, including sainfoin, alfalfa, sunflower and fruit trees. It is of special importance for the pollination of fruit trees. *P. niveatus* nests mostly in the walls and eaves of buildings, in fences of orchards and gardens, and so it was commonly seen in the vicinity of residential areas as well as in mountain meadows and pastures. It is a strong and fast-flying bumblebee.

Distribution data from literature: Taurus Mts. (VOGEL 1909); Bolkar Mt. (Niğde) (FRIESE & WAGNER 1912, FAHRINGER 1922); Sultandağ (Konya) (REINIG 1967); Çankırı, Bolu (REINIG 1968); Ağrı, Van, Çorum, Eskişehir (REINIG 1971); Erciyes (Kayseri) (REINIG 1973); Antalya, Denizli (REINIG 1974); Erzurum (ÖZBEK 1983, 1990 a), Adana, İçel (ASLAN & SEKEROĞLU 1996).

Pyrobombus sulfureus (Friese, 1905)

This is a rare species, and 3 specimens were collected in only two localities. It should be pointed out that *P. sulfureus* is extremely rare in Turkey and therefore threatened with extinction. Since 1970, thousands of bumblebee specimens have been collected throughout the country, but only a few specimens of *P. sulfureus* have been found and only from Palandöken and Bolkar Mts. The quantity of faunistic data might still be insufficient to allow for definitive judgement, but this taxon should be accepted as "endangered" and should be placed in the "Red List of Threatened Animals". The distribution map for *P. sulfureus* (Fig. 5) in Turkey derived from examined specimens and literature records.

Records: Erzurum Prov.: Palandöken Mt. 2400 m. – Niğde Prov.: Gümüş, Bolkar Mt. 2200–2600 m.

Distribution data from literature: Taurus Mts., Ulukışla (Niğde) (VOGEL 1909, FRIESE & WAGNER 1912); Amanos Mt. (Osmaniye) (FAHRINGER & FRIESE 1921), Hamur (Ağrı) (REINIG 1971); Erciyes (Kayseri) (REINIG 1973).

Pyrobombus vorticosis (Gertaucker, 1872)

Widespread almost throughout the country (Fig. 1), like *P. niveatus*, but in general less abundant. Its abundance is higher in western Anatolia than in the east, where it is very rare. Occurs in meadows, mountain meadows and on road sides.

Records: Adana Prov.: Yeniköy (Pozanti) 900 m, Gedikli (Kozan) 1100 m. – Afyon Prov.: Sandıklı 1100 m. – Ankara Prov.: Çubuk 1100 m, Elmadağ 1300 m. – Antalya Prov.: Yazırözü (Beydağları) 1200 m, Saklıkent 1600–1800 m, Karagöl 1300 m (Elmalı), Cevizli (Aksaklı) 1600 m. – Ardahan Prov.: İlgar Mt. A 10x10 grid of black dots arranged in a sparse pattern. The dots are located at various coordinates, including (1,1), (2,2), (3,3), (4,4), (5,5), (6,6), (7,7), (8,8), (9,9), and (10,10), as well as several other scattered positions such as (2,5), (5,2), (3,7), (7,3), (4,8), (8,4), (5,9), (9,5), (6,10), and (10,6). The grid consists of 100 small squares.

Leguminosae
